Gusty winds are expected again Tuesday across western Nevada, though speeds will diminish somewhat...mainly 20-30 mph. Highest winds will be along the Sierra Front. As the dry air continues its eastward progression Tuesday, storm activity will be confined to far southeastern Utah and the eastern portion of the Arizona strip.

Models suggest that moisture will surge northward into the far southern end of the Great Basin on Wednesday and continue to march northward through late this coming week, bringing a return of more widespread afternoon thunderstorm activity.

A cold front will push across our northern areas (Mtns of Central ID) late Wed into Thursday. Will evaluate for potential of "High Risk" for gusty winds in some of those areas.
